Diabetes Management Software  
**SMARTLOG**

- Saves time and eliminate errors from manual entry by easy and quick Bluetooth data transfer
- Review data with convenient charts and graphs
- Track carb intake, insulin doses, medication and activity levels along with blood glucose results

# Premier $\alpha$

Blood Glucose Monitoring System

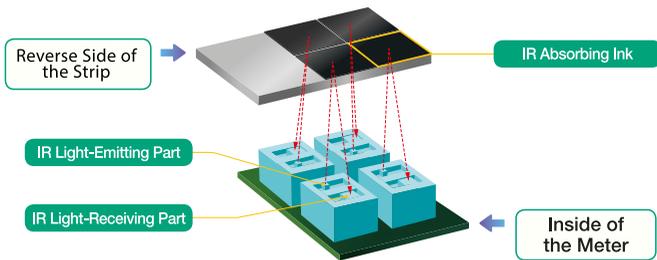

Meets ISO15197:2013(2015) accuracy standards

## Advanced, Seamless Diabetes Management

### CodeSens™ Technology

- Patented no-coding technology
- Glucose meter can automatically recognize the code number of each glucose strip
- Allows user to obtain the most reliable and accurate results

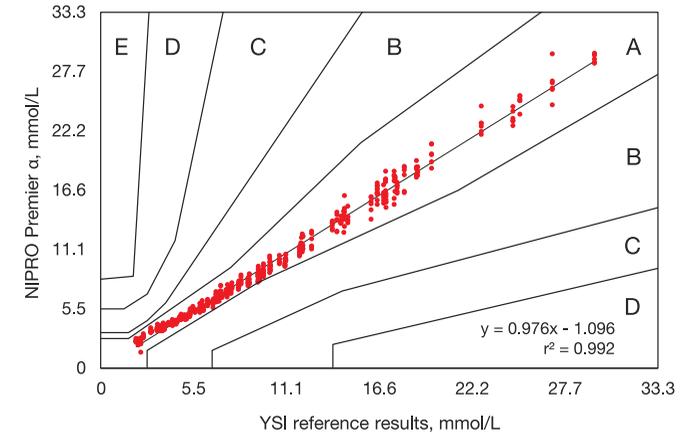

**NO CODING** ✓

### Features

- No coding
- Wide hematocrit range: 15-65%
- Tiny, 0.4  $\mu$ L sample size
- Fast test time, 5 seconds
- Long battery life, 3000 tests
- Stores 1000 results with time/date
- Total, pre-meal, post-meal, fasting averages over 1, 7, 30, 90 days
- Control solution detection
- Strip ejector button
- Post-meal alarms
- Hypoglycaemia warning
- Alternate site testing
- Data management capabilities

## Clinical Performance

Based on ISO 15197:2013(2015) Criteria for Accuracy Utilizing GDH-FAD Enzyme

Accuracy Criteria	Within $\pm 5$ mg/dL or $\pm 5\%$	Within $\pm 10$ mg/dL or 10%	Within $\pm 15$ mg/dL or 15%
Percent (n/n) within criteria	400/600 (66.7%)	576/600 (96.0%)	598/600 (99.7%)

In this study, the system demonstrates accurate performance.

Clinical data obtained exceeds the minimum accuracy criteria for ISO 15197:2013(2015) where >95% of individual glucose results shall fall within  $\pm 0.83$  mmol/L (15 mg/dL) of the reference results at blood glucose concentrations below 5.55mmol/L (100 mg/dL) and within  $\pm 15\%$  of the reference results at blood glucose concentrations greater than 5.55mmol/L (100 mg/dL).
